Code 42

100 Washington Avenue South, 20th floor
Minneapolis, MN 55401
United States

Dear Code42 recruiter or hiring manager,

My educational background is in Computer Science, and I have over four years of experience using Java, C, and C++. I have also taken courses in web development and have solid experience using Internet languages like HTML5, CSS3, and JavaScript. At my current job, I have worked with the aforementioned languages as well as other web tools such as Ruby on Rails, Heroku, CloudFront & S3, and several APIs.

I have been told I am a very fast learner, and in fact excelled at my first job as a firmware engineer with no prior firmware experience. My background is rooted in software and firmware, but I am passionate about the Internet and web technologies and would like to shift my career to full stack web development. I am eager to contribute my enthusiasm and skills to the Code42 team.

I am also a fan of CrashPlan, and use it to back up my personal computer to a server on my local network. I would greatly appreciate the opportunity to work with and learn from you and your talented team. I look forward to speaking with you soon!

Sincerely,
Garrett Sundin
