UnitedHealth Group

Eden Prairie, MN

Dear UnitedHealth Group recruiter or hiring manager,

My educational background is in Computer Science, and I have 4+ years of experience using Java, C, and C++. I have also taken courses in web development and have solid experience using Internet languages like HTML5, CSS3, and JavaScript. At my current job, I have worked with the aforementioned languages as well as other web tools such as Ruby on Rails, Heroku, CloudFront & S3, and CloudFlare.

I have been told I'm a very fast learner, and in fact excelled at my first job as a firmware engineer with no prior firmware experience. My background is rooted in software and firmware, but I am passionate about the Internet and would like to shift my career to full stack web development.

My previous jobs in tech support and product development have prepared me well to work with other people, whether they're customers asking for help, development team members collaborating on a project, or clients requesting features for a product.

I am certain that my resume will give you a greater understanding of my qualifications for this exciting opportunity.

I would greatly appreciate the opportunity to work with and learn from you and your talented team. I look forward to speaking with you soon.

Sincerely,

Garrett Sundin
